PROVIDE EFFECTIVE BROAD SPECTRUM PROTECTION AGAINST BOTH UVA & UVB RAYS.

If you are looking for an everyday sunscreen for all skin types that is light weight & oil free, look no further. This formula leaves your skin with a matte finish, even under makeup. Sunbrik sunscreen is the solution.

## ETHYLHEXYL METHOXYCINNAMATE

is currently the most popular sunscreen chemical, with good UVR absorption, safety, solubility in oils and insolubility in water, so that it is suitable for use in most waterproof sunscreen formulations. provide an appropriate Sun Protection Factor (SPF) in sunscreens or to protect cosmetics against UV radiation

## METHOXYPHENYL TRIAZINE

'is a synthetic UV filter that delivers broad-spectrum sun protection due to its ability to absorb UVA and UVB rays. It is a broad-spectrum (covers the whole UVB and UVA range, 280-400 nm) chemical sunscreen agent with peak protections at about 310 and 345 nm and unlike older UV filters, it's very photostable. It hardly deteriorates in the presence of UV light and it's also useful in stabilizing other less stable sunscreen agents, like the famous UVA protector, avobenzone

## SILICONES

like dimethicone, are used in sunscreens to create a smooth feel and provide water resistant qualities. Silicones are another group of occlusive ingredients, clogging pores and sometimes leading to skin irritation
